

# Proposed Miami Bridge Improvements

Alternative Transportation Solutions — Long-Term Benefit

## New Commuter Lots

<u>Facility</u>	<u>Cost</u>	<u>Key Considerations</u>
Three Commuter Lots	\$0.375 Million	<b>Long-Term Benefit</b>

- ◆ There are currently no Commuter Lots in the Brunswick/Carrollton/Marshall area.
- ◆ Our research indicates that one of the primary generators of traffic on the Miami Bridge is commuting traffic between Brunswick and Marshall.
- ◆ The Miami Bridge closure increases the Brunswick-to-Marshall commute by only 25 miles.
- ◆ New Commuter Lots combined with private carpooling may be the best answer.
- ◆ MoDOT would help the community coordinate carpooling efforts.
- ◆ New Commuter Lots would continue to benefit the community after the Miami Bridge re-opens.
- ◆ It is estimated that three new Commuter Lots would cost approximately \$375,000.
